

Demo Guide

A repeatable eight-step path for judging the working in-ride commerce experience.

1

Register

Open the landing page and create a fresh customer account. **Expected:** registration succeeds and the user is signed in or can sign in with the same credentials.

2

Login

Sign in using the Auth service flow. **Expected:** a JWT-backed session enables protected pages and requests.

3

Browse Catalog

Visit Catalog and search familiar travel items such as charger, coffee, snacks, water, or headphones. **Expected:** results come from Catalog and reflect the demo cab inventory view where shown.

4

Chat with AI

Try: `I'm heading to the airport and have INR 800` or `I forgot my charger`. **Expected:** the assistant reasons about travel context, asks follow-up questions when needed, and does not invent products.

5

Add to Cart

Add a recommended item from the chat or a product from Catalog. **Expected:** cart quantity, price, subtotal, and total update for the signed-in user.

Optional AI translation demo: In AI Chat, choose Translate Conversation and enter a passenger message plus a driver reply. GPT-5.6 is used when `OPENAI_API_KEY` is configured; otherwise the UI identifies the fallback behavior.

COMPLETION

Finish the Commerce Journey

6

Checkout

Open Cart and complete checkout. **Expected:** the Cart service sends the authenticated checkout request, an order is created, and the cart is emptied after success.

7

Mock Payment

Select UPI, credit card, debit card, or wallet and finish the payment. **Expected:** payment status becomes **PAID**, the UI shows success, and the order becomes **CONFIRMED**.

8

Order Tracking

Open Orders or the order detail. **Expected:** accurate items, quantities, totals, payment information, and tracking progression: **PLACED -> CONFIRMED -> HANDED_OVER -> COMPLETED**.

Useful API Checks

PURPOSE	ENDPOINT	EXPECTED
Catalog browse	GET :8083/api/v1/catalog/products	200
AI chat	POST :8086/api/v1/ai/chat	200 with valid JWT
Cart checkout	POST :8084/api/v1/carts/me/checkout	200 / 201 with valid JWT
Payment	POST :8087/api/v1/payments	200 / 201
Order	GET :8085/api/v1/orders/{id}	200 for owner

Judge preparation: replace package placeholders with current screenshots, a public repository URL, a demo video URL, and any temporary demo credentials you intentionally choose to provide.

Success Criteria

Secure

Protected actions require the same JWT accepted by the backend services.

Grounded

AI recommendations reference only active catalog products.

Complete

One continuous flow reaches a paid, confirmed, trackable order.
